Education

Graduated from Limkokwing University of Creative Technology in Malaysia

Completed AUGUST 2015

- Key areas of study included Programming, Business, Marketing, Digital Modeling, Animation, Artificial Intelligence, and Unity & Unreal Engines.

- Received Bachelors of Science (Hons) Degree in Games Technology and achieved a CGPA of 3.82

Current Employment

Serving as Webmaster at Al-Huda International & Al-Huda Publications Pvt. Ltd.

Since FEBRUARY 2018

Hired to take over responsibilities to maintain websites for the company. Namely alhudapk.com and alhudapublications.org. Part of my job is to ensure the web servers, hardware and software are operating accurately.

I design new pages, develop new features, generate and revise content, produce new graphics, examine and analyze site traffic, monitor performance and improve load speeds, apply upgrades and take backups.

Additionally I am working on creating a new website which will consolidate the institute's entire web presence into one website and cope with modern design standards to provide the best end-user experience.

Past Experiences

From FEBRUARY 2017 till AUGUST 2017

The Developer Line - A group of three developers - working to deliver projects received on freelance websites. It was a great learning experience

Used frameworks such as Vue.js, ASP.NET, and WordPress to successfully deliver dozens of projects in a short period of time. Reasonably got familiar with many aspects of full-stack development because of working in a small team and having to solve problems alone. I am most proud of my lakecustom.com project.

From MARCH 2016 till NOVEMBER 2016

Qairus Pvt. Ltd. offered me a contract to lead the Front-end development of their ongoing IoT & QMS projects

Remade product website. Coded new API calls. Added customer login, checkout, subscription management, registration form, and payment system. Prototyped UX layouts for product customer portals and produced several graphical sets such as icons, logos, and other UI elements.

From DECEMBER 2014 till MARCH 2015

Interned for Royaah Services in Malaysia

Joined as a new intern and quickly learned the company's web services and development platform which was Wordpress. Project work included designing, developing, testing, and deploying web services for a student/teacher portal and an engine to process search queries for available courses in SEA region.

I had to proactively utilize my graphic designing skills (Photoshop, Illustrator) to design and deliver custom icons, logos and posters which enhanced the quality of delivery for various clients and resulted in favorable feedback for the projects.

Notable Skills

- HTML5
- CSS3
- JavaScript
- Gulp
- Sass
- Vue
- Python
- PHP
- WordPress
- Magento
- Joomla
- Git
- Photoshop
- Illustrator

Work Platforms

- Linux
- Windows
- VS Code

Ambitions & Objectives: I would love to work in a large team environment taking on challenging projects and solving those using cutting-edge tools and modern development workflows. I wish I would get work with people who are more experienced and skilled than me so I can learn from them as they share their expertise. In hopes that one day I will obtain enough knowledge to become a full-stack developer, capable of taking on entire projects myself from start to end.
